

101

EASY WAYS TO SAVE ENERGY AND MONEY

A Touchstone Energy® Cooperative 

WHERE DOES MY MONEY GO?

Electronics include: telephone and external power adapters, consumer electronics (computer, TVs and DVD player), home office equipment, and small appliances

Appliances include: refrigerator, dishwasher, clothes washer and dryer

Source: Typical House Factoid Memo. Lawrence Berkeley National Laboratory. April 2013.

Annual Energy Bill for a typical single family home is \$2,060

TOP TEN

Here are ten tips that any good energy saver should not live without.

1. Replace any light bulb, especially ones that burn more than one hour per day, with a light-emitting diode (LED) bulb.
2. Seal from the inside. Air sealing is an inexpensive way to lower energy costs and improve comfort. Seal gaps and holes in walls, floors, and ceilings with caulk or foam sealant. Look for cracks around windows and where wires and pipes pass through.
3. Plug electronic devices such as cable boxes, printers and TVs into power strips to turn off during vacations or long periods without use. Smart power strips make it an easy task to save money.
4. Close shades and drapes during the day to help keep your home cooler in the summer and warmer in the winter.
5. Change your central HVAC system filter when dirty by the manufacturer's recommendations. Dirty filters can impact your home comfort and increase your electricity bill.
6. A one-degree increase in heating setpoint or reduction in cooling setpoint can increase energy use by 3-5%.
7. Have your duct work checked for leaks. Leaks at the return, air handler and supply can be a major source of high bills. In mobile homes check for leaks at the grill, cross over duct and down flow air handler.
8. Set both the upper and lower water heater thermostats no higher than 120° F.
9. An electric space heater can cost more than \$100 per month to operate. Minimize their use, except for limited or temporary spot heating. Turn space heaters off when leaving the room.
10. Ensure refrigerator door seals are tight. Eliminate unnecessary refrigerators.

LIGHTING

Traditional lighting can amount up to 12% of your monthly energy use. Energy-saving light bulbs can slice lighting costs by 75%.

11. Replace outdoor lighting with its equivalent outdoor-rated LED bulb. LEDs work well in cold weather.
12. Use fixtures with electronic ballasts and T-8, 32-watt fluorescent lamps.
13. Use outdoor security lights with a photocell and/or a motion sensor.
14. Turn off unnecessary lighting.

A lumen is a unit used for the measurement of visible light. A traditional 60-watt light bulb produces 800 lumens. See the chart below to see how many watts other bulbs use to produce the same amount of light.

PLUG LOADS

Other plug loads around the home can add up to be 8-10% of monthly energy use.

15. Turn computers and monitors off when not in use.
16. When buying a new computer, consider buying a laptop. It uses less energy than a comparable desktop.
17. Turn large-screen TVs off completely when not in use.
18. Check for energy-saving settings on flat-panel TVs like automatic brightness control and a power-saving sleep mode.
19. Request an ENERGY STAR® set-top box from your cable or satellite provider.
20. Turn off stereos and radios when not in use.
21. Enable auto power down feature on gaming consoles.
22. If you don't unplug them, use energy-saving modes or automatic sleep functions on electronics.
23. Remember to turn off hair curling irons and hot rollers.
24. Make sure electric blankets are turned off in the morning.
25. Ensure all new appliances, electronics and lights are ENERGY STAR® labeled.
26. Reduce pool pumps' and heaters' run time by using a time clock.
27. Avoid using portable dehumidifiers continually; use only as needed to for temporary relief from high humidly conditions.
28. Make sure heat tape is off when not needed.
29. Unplug battery chargers when not needed.

DO A LITTLE.

SAVE A LOT.

EVERYTHING YOU DO — FROM FLIPPING A SWITCH TO
UPGRADING YOUR LIGHTING — CAN ADD UP TO
BIG SAVINGS.

SO TAKE YOUR PICK, AND SAVE YOUR MONEY.

Touchstone Energy®
Cooperatives

KITCHEN

The kitchen can amount to 15-20% of your monthly energy use, which includes appliance use and refrigeration.

- 30. Turn off coffee makers when not in use.
- 31. Use your refrigerator's anti-sweat feature only if necessary.
- 32. Switch your refrigerator's power-saver to "ON," if available.
- 33. Clean refrigerator coils annually.
- 34. Regularly defrost refrigerator or freezer to avoid ice buildup.
- 35. Set the refrigerator temperature to 34°-37°F and freezer temperature to 0°-5°F.
- 36. Unplug unused refrigerators or freezers. Recycle them if you do not need them.
- 37. Use microwave for cooking when possible.
- 38. When cooking on the oven range, use pot lids to help food cook faster.
- 39. If you are heating water on the stove, use hot tap water instead of cold.
- 40. Remember to use the kitchen exhaust fan when cooking. Turn it off after cooking.
- 41. Use a slow-cooker instead of simmering foods on the stove.
- 42. If rinsing dirty dishes before putting them into the dishwasher, do so with cold water.
- 43. Use cold water for garbage disposal.
- 44. Only run dishwasher when fully loaded.

WATER HEATING

Water Heating can amount to 12% of your monthly energy use.

- 45. For households with one or two members, a 115°F setting may work fine.
- 46. If your co-op offers an off-peak water heating program, take advantage of it.
- 47. Drain 1-2 gallons from the bottom of your water heater each year to reduce sediment build up.
- 48. Don't use a hot water circulation pump without a timer and/or a temperature sensor control.
- 49. Insulate exposed hot water lines.
- 50. Limit shower length to 5-7 minutes.
- 51. Install water saving shower heads.
- 52. Fix dripping faucets and check for other plumbing leaks under your house.
- 53. Don't let water run while you are shaving or brushing your teeth.

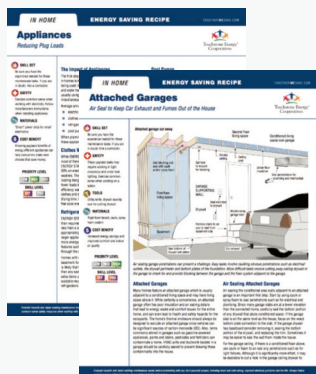

LAUNDRY

Laundry can amount to 5-9% of your monthly energy use.

- 54. Wash clothes in cold water. Use hot water only for very dirty loads.
- 55. Only do full laundry loads.
- 56. If you must do smaller loads, adjust the water level in the washing machine to match the load size, especially when using hot water.
- 57. Always use cold-water rinse.
- 58. Use bath towels at least twice before washing them.
- 59. Clean your dryer's lint trap before each load.
- 60. Make sure the dryer's outdoor exhaust door is not blocked or clogged.
- 61. Verify that the dryer vent hose is tightly connected to inside wall fitting.
- 62. Check that the dryer vent hose is tightly connected to the dryer.
- 63. Minimize clothes drying time; use an auto moisture sensor on the dryer if available.
- 64. Dry consecutive loads to harvest heat remaining in the dryer from the last load.
- 65. In hot weather, avoid running the dryer during the heat of the day.
- 66. Consider using a "solar-powered" clothes dryer: an old-fashioned clothes line.

HEATING / AC

Heating & Air Conditioning are usually the largest loads in a home and responsible for 40-50% of your monthly energy spend.

67. Set thermostats to 78° F in summer, 68° F in winter.
68. Install a programmable or SMART thermostat to save even more.
69. Run ceiling paddle fans on medium, blowing down in summer and paddle fans on low, blowing up in winter.
70. Turn off ceiling fans when leaving the room. Fans cool people, not rooms.
71. When installing new air filters, make sure they are facing in the correct direction (look for arrow on side of filter).
72. When heating or cooling, keep windows locked.
73. Insulate electric wall outlets and wall switches with foam pads.
74. Caulk along baseboards with a clear sealant.
75. Caulk around plumbing penetrations that come through walls beneath bathroom and kitchen sinks.
76. Caulk electrical wire penetrations at the top of the interior walls in the attic.
77. Close shades and drapes at night to keep heat in during the winter.
78. Make sure drapes and shades are open during the day to catch free solar heat in winter.
79. Ensure the attic access door closes tightly and is insulated.
80. Make sure insulation in your attic does not block soffit vents.

-
- 81.** Do not close off unused rooms that are conditioned by forced-air systems.
 - 82.** Do not close supply air registers.
 - 83.** Check to be sure return air grilles are not blocked by furniture or bookcases.
 - 84.** Ensure windows and doors are properly weather-stripped and use door sweeps.
 - 85.** Don't run the heat in the Emergency Heat mode (E-heat) unless the unit won't heat otherwise. Always call a qualified HVAC technician ASAP if there is a problem with your system.
 - 86.** Do not use roof-top power ventilators for attic exhaust, as they may draw conditioned air from your home.
 - 87.** Have your HVAC system serviced once per year by a NATE-certified technician.
 - 88.** Monitor your home's relative humidity in the summer. If it consistently stays in the 60% range or higher, ask your HVAC technician about lowering your central air conditioning unit's indoor fan speed.
 - 89.** Ensure window A/C units are weather-stripped. Remove the unit in the winter, and close and lock the window.
 - 90.** Remove and clean window A/C filters monthly.
 - 91.** Keep "fresh-air" vents on window A/C units closed.
 - 92.** Keep your thermostat FAN setting in the AUTO mode. Operating it in the ON mode uses more energy and can cause the humidity level to be higher inside.
 - 93.** Minimize use of electric space heaters, except for limited or temporary spot heating. Turn space heaters off when leaving.

-
- 94. Ensure your outdoor heat pump/air conditioning unit is kept clean and free of debris.
 - 95. When using the fireplace, turn down your heating system thermostat.
 - 95. When using the fireplace, open the outside air vent in the fireplace (if provided) or open the nearest window slightly.
 - 96. Keep fireplace dampers closed unless a fire is burning.
 - 97. Ensure floor registers are not blocked with rugs, drapes or furniture.
 - 98. Caulk around storm windows and basement windows.
 - 99. Verify your ducts are tightly connected to your HVAC equipment. Well sealed and insulated ducts can save up to 10%.
 - 100. Turn off bathroom and kitchen exhaust fans 15 minutes after the job is complete or install 15-minute timers on bathroom ventilator fans.
 - 101. Plant trees and shrubs to provide shade on the east, south and west sides of your home. Evergreen trees and shrubs can provide a windbreak on the north side.
