A Summary of Responsibilities Include:

- Designs, stakes, and inspects proposed and existing electrical distribution facilities
- Accurately maintains and updates distribution facilities within various GIS Software to ensure consistency between field and map
- Completes distribution system audits and complete system maintenance within GIS Software
- Complete quality control within the GIS Data by generating and creating necessary reports

Qualification and Skill Requirements:

- Skill and knowledge normally acquired through a bachelor's degree in a GIS related field is preferred. We may consider experience and other related education
- Proficiency in Microsoft Office: Word and Excel
- Working knowledge of Microsoft SQL Server
- Knowledge in GIS Software: ESRI, Milsoft, Partner
- Knowledge in Modeling and CAD Programs
- Knowledge of RUS specifications, the National Electrical Safety Code, and the National Electric Code is preferred
- Excellent attention to detail
- Strong organizational skills
- Well-developed oral and written communication ability
- Ability to exercise good judgement and think critically to solve problems
- Ability to positively and professionally interact with both internal and external entities

Must Haves:

- Ability to lift 50 lbs. and carry 20 lbs.
- Ability to work in extreme temperatures and weather conditions
- Ability to walk a mile over uneven terrain, jump ditches, and perform related tasks required for staking and design of electrical distribution facilities
- Comfortable working independently and in a team environment
- Ability to work occasional overtime

This position has a 6-month probation period.
